

Florida Nightlife District After-Hours Visibility Scorecard

Nightlife districts can increase foot traffic, vehicle movement, and activity around nearby properties after normal staffed hours.

Tick each box below to review how much visibility you have across the areas that may be most exposed when staffing reduces.

2

Clear Visibility

Activity can be seen or reviewed reliably during the after-hours period.

1

Partial Visibility

Some visibility exists, but there are gaps in coverage, timing, or access to information.

0

Limited Visibility

Activity could occur without being seen, verified, or reviewed promptly.

Review Your After-Hours Visibility

	2	1	0
Can activity still be monitored after normal on-site staffing reduces?			
Can you see or review activity at the main entrances, exits, gates, or other access points after hours?			

	2	1	0
Can you see or review vehicles entering, leaving, or remaining around the property during the after-hours period?			
Can you see or review activity along the property perimeter and the areas immediately next to it?			
Can you see or review the assets, equipment, storefronts, or external spaces most exposed after hours?			
If suspicious activity is reported, can your team quickly verify what happened and retrieve supporting footage or records?			

What to Review First:

Score 0

Prioritize first. Start with visibility areas where activity could go unseen or be difficult to verify.

Score 1

Review next. Look at areas where coverage, timing, or access to information is only partial.

Use the individual scores to identify where visibility is weakest rather than treating the total as a crime-risk rating. Also, consider measures that could strengthen visibility and deterrence during periods when nearby activity increases and on-site staffing is lowest.
