

# Florida Property Crime Business Impact Calculator

The cost of property crime rarely stops at the stolen or damaged asset.

Repairs, downtime, investigation time, project delays and temporary security measures can all add to the impact of an incident. Use your own figures to estimate what a recent theft, burglary, or vandalism incident actually cost your business.

## 1. Direct Incident Costs

Start by entering the direct costs you already know from the incident.

| Cost                                             | Your Figure |
|--------------------------------------------------|-------------|
| Stolen or damaged assets                         | \$ _____    |
| Repairs and cleanup                              | \$ _____    |
| Insurance deductible or known out-of-pocket cost | \$ _____    |
| Temporary or emergency security measures         | \$ _____    |
| Other direct costs                               | \$ _____    |
| <b>Direct Cost Subtotal</b>                      | \$ _____    |

## 2. Downtime and Operational Disruption

Next, record the known operational impact of the incident. Use the sections below to calculate lost operating time, staff response time and any other disruption costs you can reliably identify.

### Lost Operating Time

Hours or days affected

\_\_\_\_\_

Estimated cost of  
disruption per hour/day

\$ \_\_\_\_\_

Downtime Cost:

\$ \_\_\_\_\_

### Staff and Investigation Time

Total staff/admin hours spent responding

\_\_\_\_\_

Estimated average  
cost per hour

\$ \_\_\_\_\_

Internal Response Cost:

\$ \_\_\_\_\_

### Other Operational Costs

| Cost                                         | Your Figure |
|----------------------------------------------|-------------|
| Overtime or temporary staffing               | \$ _____    |
| Known project delay or missed delivery costs | \$ _____    |
| Other operational disruption                 | \$ _____    |
| <b>Operational Cost Subtotal</b>             | \$ _____    |

### 3. Estimate the Known Business Impact

Bring the direct and operational costs together to calculate the total known financial impact of the incident. Only include figures you have already entered in the sections above.

| Cost Area                        | Calculated Figure |
|----------------------------------|-------------------|
| <b>Direct Cost Subtotal</b>      | \$ _____          |
| <b>Operational Cost Subtotal</b> | \$ _____          |

**Other Operational Costs**

\$ \_\_\_\_\_

### 4. Put the Result in Context

Use the figures you calculated above to identify which cost area contributed most to the incident's known financial impact.

**Which cost area contributed most to the incident impact?**

- ☐ Direct incident costs
- ☐ Downtime costs
- ☐ Internal response and other operational costs
